                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      rejection, as vaccine adjuvants, for treatment of photosensitivity, inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumours, viruses, bacteria and parasites (especially intracellular pathogens) and for preventing organ rejection: A vector containing (I) is used to restore, e.g. by gene therapy, II-10 sensitivity to a cell that expresses a dysfunctional IIIOR and is able to bind II-10 but not to transduce a signal. Antisense CRFB4 sequences (especially ribozymes), can inhibit II-10 activity in cells. Antibodies specific for CRFB4 are used to measure and localise CRBF4, for diagnosis of defective II-10 activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding the interleukin-10 (IL-10) receptor (IL10R) and a sequence (S2) encoding CREM4, both operably linked to expression control sequences. Cells containing (I) may be used to identify agonists/antagonist of IL-10. Agonists are potentially useful, e.g. for preventing allograft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CRFB4 protein.

                                                                                                                             binding receptor polypeptide and is a novel member of the type 2 cytokin receptor. family (CRF2). An expression vector containing the Zcytor polynucleotide, operably linked to transcription promoter, a sequence encoding a transmembrane and intracellular domain, or both, and a transcriptional terminator can be used to transform host cells for the recombinant production of the polypeptide. The sequences can be used to study the Zcytor7 gene and to isolate ligands binding to it. Zcytor7 is
Sequence
                                    preferentially expressed in the kidney, pancreas, prostate or nervous tissue. Agonists of Zcytor? can be used to stimulate prolliferation and differentiation of cell in these organs. The antagonists and agonists or also be used in the treatment of renal, neural, pancreatic and prostate
                                                                                                                                                                                                                                                                                    for treating renal, neural, pancreatic and prostatic diseases Claim 1; Pages 55-59; 72pp; English.
This represents the Zcytor7 cytokine receptor. Zcytor7 is a ligand-
                                                                                                                                                                                                                                                                                                                                                                                                                Adams RL, Farrah TM, Jelmberg AC, Whitmore TE;

Interferon gamma receptor beta subunit - mouse N; Alternate names: IFN-gamma R beta chain; IFN-C; Species: Mus musculus (house mouse) C; Date: 06:Oct-1994 *sequence_revision 18-Nov-
                                                                                                                                                                                                                                                                                                      R;Hemm1, S.; Bohn1, R.; Stark, G.; Di Marco, F.; Aguet, M.
Cell 76, 803-810, 1994.
A;Title: A novel member of the interferon receptor family complements functionality A;Reference number: A49947; MUID:94170381
A;Accession: A49947
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq_name: pir2:A49947

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
TISSUE SPECIFICITY: IFN RECEPTORS ARE PRESENT IN ALL TISSUES AND EVEN ON THE SURFACE OF MOST IFN-RESISTANT CELLS.
PTM: PHOSPHORYLATED ON TYROSINE RESIDUES BY TYRZ TYROSINE KINASE.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cell Biol 14:8133-8142(1994)
FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYLE I IFNS TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS INCLUDING JAKS, TYRZ, STAT PROTEINS AND IFN-R ALPHA-AND BETA-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SwissProt_38:INR1_HUMAN
